

dental implants
for tooth replacement

be a confident you

why replace missing teeth?

Losing one or more of your teeth creates a gap in your smile, affects your ability to chew properly, and can alter your diet and nutrition.

smile big,
eat what you want,
be a confident you!

prevent premature aging

normal profile

after tooth loss

after bone loss

tooth loss causes bone loss

maintain your jawbone and gums

With dental implants, healthy teeth are not compromised. Dental implants, like natural teeth, stimulate the jaw and reduce bone loss.

the new standard of care for tooth replacement

Dental implants bond with healthy bone and provide permanent support for dental crowns and dentures.

Dental implants look and feel natural and can last a lifetime.

dental implants replicate natural teeth

untreated missing teeth

- unattractive smile
- loss of chewing ability
- accelerated bone loss

traditional crown & bridge

- healthy teeth ground down
- bone loss continues
- greater risk for cavities and tooth failure

dental implants with a crown

- preserve healthy teeth
- full chewing ability
- reduce bone loss

single tooth replacement

A missing tooth can be replaced by a dental implant without altering the healthy adjacent teeth.

single tooth missing

the implant is placed in the bone beneath the gum

abutment and final crown are custom made to match your existing teeth

multiple tooth replacement

If you are missing more than one tooth, dental implants may be your best treatment option.

removable implant-supported denture

If all upper or lower teeth are missing, multiple implants may be used to support a new removable denture that will attach securely to a custom-made bar.

a custom-made bar is
placed to secure a
removable denture

implant-stabilized denture

If all your upper or lower teeth are missing, another option may be to stabilize your removable denture using a small number of implants. This can sometimes be a cost-effective solution.

advancements in implant dentistry

BioHorizons uses science and innovation to create unique dental implant products with proven esthetic results.

Our implants are lightweight, durable, biocompatible and made from titanium, the most widely used material in implant dentistry.

Our dental implants carry a lifetime warranty and are clinically-proven by some of the most thorough and in-depth research in the industry.

the Laser-Lok[®] advantage

BioHorizons implants are treated with our proprietary Laser-Lok technology. This helps your smile remain beautiful over time.

Ask your dentist for more information about restoring and maintaining your natural smile with dental implants from BioHorizons.

before treatment

Your dentist will take x-rays and create a model of your existing teeth to determine the optimal implant position.

Occasionally, a bone or gum tissue graft will be necessary to create adequate space for the implants.

during treatment

Dental implants are placed in the bone in a relatively pain-free procedure.

The bone and gums will be given time to heal before an abutment and crown are attached.

In most cases, you can receive some type of temporary teeth the same day the implant is placed.

be proud of your smile

after treatment

Your final crown will be placed once the implant has bonded, restoring your natural smile.

are you a candidate?

Certain uncontrolled medical conditions may decrease implant treatment effectiveness, so first discuss your full medical history with your dental implant specialist.

Patient results may vary. Only a trained clinician can determine the best treatment plan. Please ask your dentist to explain the benefits and risks to determine whether dental implants are right for you.

implants & insurance

The value of dental implants far exceeds conventional treatment options.

Insurance policies vary but most cover a portion of the restorative procedure.

Financing options are often available with competitive interest rates, and payments can be tailored to your budget.

renew your confidence

Ask your dentist or
dental implant specialist
for more information about
BioHorizons implants.

smile big

Change your life with dental implants to restore your appearance, speech, nutrition, oral health, comfort, and self-esteem.
